

Camelot / Tabula Extraction Test Document

This PDF document is explicitly designed to test table extraction algorithms such as **Camelot** and **Tabula**. It contains sample text alongside two distinct table formats optimized for the two main extraction modes: *Lattice* (grid-line based) and *Stream* (whitespace/margin based).

Note on Extraction Methods:

- **Lattice Method:** Looks for defined vertical and horizontal rulings/lines forming table cells.
- **Stream Method:** Relies on whitespace separation between columns when no visible grid lines exist.

1. Lattice Extraction Target (Grid-Lined Table)

This table features full outer and inner border lines around every cell, making it ideal for `flavor='lattice'`.

ID	Project Name	Status	Budget (\$)	Completion
PRJ-001	Data Pipeline Refactor	Completed	\$12,500	100%
PRJ-002	OCR & Parser Engine	In Progress	\$28,000	65%
PRJ-003	Cloud Migration	Planning	\$45,000	15%
PRJ-004	UI/UX Redesign	Completed	\$8,200	100%

2. Stream Extraction Target (Borderless / Whitespace Table)

This table lacks vertical bounding lines and relies entirely on whitespace columns, making it ideal for `flavor='stream'`.

Metric Key	Q1 Benchmark	Q2 Benchmark	Q3 Target	Variance
System Latency (ms)	120.5	98.2	85.0	-13.2%
Throughput (req/sec)	1,450	1,820	2,200	+20.8%
Error Rate (%)	0.45%	0.28%	0.15%	-46.4%
Active Users	14,200	18,900	25,000	+32.2%
